

Security Technology Integration & Optimization

As organizations face an ever-increasing number of threats from malicious insiders and outsiders combined with an ever-decreasing number of knowledgeable resources, it's nearly impossible to keep pace with these evolving threats—resulting in a reactive security posture, increased risk, and higher costs. Further, as organizations deploy multiple information security platforms and technologies in their efforts to reduce risk, in many cases the resulting complexity, configurations, and man-power requirements associated with stand-alone and/or “mis-tuned” solutions may actually increase risk. Though these systems may have functioned well individually, security “silos” and/or poorly performing platforms are often now a barrier to effective business operation and risk management.

Furthermore, there is a need to keep pace with evolving threats by “tuning” your platforms and settings to achieve maximum functionality and performance. The Patriot Security Integration and Optimization service can help organizations achieve maximum value from their security investment, while simultaneously mitigating risks, improving current operations, and aligning with industry standards and best practices. Our proven risk-based methodologies assess the effectiveness of existing as well as planned security systems and operations to ensure that our customers have a clear blueprint for step-by-step security architecture integration and optimization.

We're able to review your infrastructure from the network to the data center and the endpoints, and provide you with a comprehensive analysis of your enterprise vulnerabilities and areas needing improvement—from the integration of disparate security components to the optimization of the performance and effectiveness of individual or integrated components. The end result is an improved security risk posture and manageable operating costs.

The Patriot Security Integration and Optimization approach begins with a detailed review of your security goals, identifying critical assets and gathering business and technical requirements. We then conduct a series of on-site interviews with key staff members, review all available documentation related to security investments, thoroughly assess your infrastructure, and analyze your information security and compliance processes.

Patriot then delivers a detailed report that addresses all aspects of your security, complete with a series of scalability, performance, and manageability improvement recommendations; future investments and integration points; and a roadmap for integrating and optimizing your current security investments and protecting critical data—minimizing your risk now and into the future. Upon agreement, we are then able to apply these integration and optimization recommendations to help you achieve your goals.

Patriot's deep experience with multiple security hardware and software platforms allows us to fully understand the requirements and complexities of today's security demands, and apply our technical knowledge to integrate these security technologies to operate as a single system. We are able to define your needs, evaluate your expectations, develop a security architecture strategy, and provide a complete integration and optimization of all of your systems capabilities, eliminating redundancies, optimizing efficiencies, saving you money, and improving your risk posture.

The Patriot Security Integration and Optimization service solution includes the following:

- Requirements discovery
- Secure architecture & framework design
- Project planning
- Technology evaluation and selection
- Technical refresh
- Performance improvements
- Product deployment & configuration reviews
- Use case design & implementation
- Security policy framework definition
- Policy testing
- Design of reports & dashboards
- Integration into the enterprise-wide security architecture

Patriot specializes in building integrated security systems by putting together and optimizing components from different vendors and making those components work as one system to achieve the combined result of cost reduction and risk mitigation.

Patriot's deep experience in security software and hardware allows us to bring broad subject matter expertise across a number of vendor platforms. For example, we have current, extensive experience and certifications in the following solutions:

Enterprise Lifecycle Security Specialists

Founded in 1996, Patriot Technologies is a privately owned, small business headquartered in Frederick, MD serving government and commercial organizations worldwide. To learn more about how Patriot's Professional Services can benefit your enterprise, call **301-695-7500** or visit **www.patriot-tech.com**.
