

Internal Security Assessment

Because no two organizations are alike, Patriot believes that in order to perform a thorough analysis of your security posture we must understand who you are and what you do. While other security assessment providers run a few tools and print some thick reports that may look impressive, our security assessments begin with an understanding of your organization. Patriot starts with personal discussions to obtain knowledge about the entire operational environment—from business processes to policy mandated levels of trust. We still provide a detailed report, but Patriot's security assessments don't stop there. We then focus on the areas that matter most to you and produce a security analysis that is relevant and provides actual value.

Patriot accomplishes this by utilizing a proven process developed by our team of engineers that draws upon their years of performing a wide variety of security-related activities for organizations in both the private and public sector. Our custom analytical techniques are used to verify that activities on the network conform to your corporate security policy.

A Patriot Technologies Internal Security Assessment will save your organization time and money by focusing on your security priorities and project scope.

Got Mandates?

DIACAP/DITSCAP
