CoreTrace Keeps Federal Government Secure with Application Whitelisting Solution

Application Whitelisting Leader Announces Strong Public Sector Adoption, Key Alliances and Initiation of Common Criteria Certification

Austin, Texas – November 30, 2010 – CoreTrace®, the leading provider of secure and flexible [application whitelisting](#) solutions, today announced strong public sector momentum powered by federal government demand for its award-winning BOUNCER application whitelisting solution, key alliances, and the initiation of the process to achieve Common Criteria Evaluation Assurance Level 3+.

The highlights of CoreTrace's federal government momentum include:

- Strong public sector demand for BOUNCER, driven by the solution's scalability, self-defense capabilities, unique ability to stop and remove the most sophisticated threats utilized by APTs (e.g., targeted malware and memory attacks) and the ability to help meet FISMA & the NIST sp800-53 guidelines.
- Strong partnerships with [Patriot Technologies](#) and [immixGroup](#) to enable CoreTrace customers to purchase from government-wide acquisition contracts (GWACs) spanning GSA, NASA SEWP, and Defense IDIQ contract vehicles ENCORE, ENCORE II, ITES-2S and NETCENTS.
- Integration of BOUNCER's application whitelisting technology into the [Lockheed Martin](#) [NYSE: LMT] [IronClad™ USB drives](#).
- Selection of [EWA-Canada](#) to facilitate the process to achieve Common Criteria Evaluation Assurance Level 3+ certification for BOUNCER.

“Patriot Technologies is committed to increasing our customers security while lowering risk and costs,” said Bruce Tucker, president and founder of Patriot Technologies. “Federal agencies are turning to BOUNCER because of its ability to secure endpoint computers and servers against even unknown or custom threats used by APTs, to do so in a scalable and tamper-resistant manner, and to provide valuable intelligence about all applications installed in a given environment.”

The patented [BOUNCER](#) solution by CoreTrace helps IT organizations of all sizes increase security, improve endpoint control, and gain critical visibility into

the applications in their environment. Designed to provide the most secure endpoints with the lowest end-user interference and administrator workload, BOUNCER prevents and removes even the most sophisticated attacks while enabling dynamic updates to each system's whitelist for new trusted applications and upgrades. The result is unparalleled prevention of unauthorized applications and a lower total cost of ownership.

About CoreTrace

CoreTrace® is the leading provider of application whitelisting-based solutions. The company's award-winning and patented BOUNCER solution is at the forefront of the movement to improve security and endpoint performance by combining application whitelisting for real-time malware prevention and cloud-based blacklists for detection and reporting. Unlike other application whitelisting solutions that are simply lockdown technologies, BOUNCER's ["Trusted Change"](#) capability enables IT professionals to predefine multiple sources from which users can safely install applications and have them automatically added to the whitelist—all with minimal IT involvement. The result: full prevention of unauthorized applications, improved overall security, and lower total cost of ownership. CoreTrace's customers include organizations in a wide variety of industries, such as energy, oil and gas, retail, financial services, telecommunications, as well as government agencies.
